GRASS

Lolium Perenne L.

CINQUALE

Morphological and physiological characteristics

- Habitus: cespitose
- Size: medium – big
- Foliage: several thin leaves
- Precocity: medium – late

Agronomic characteristics

- Cold resistance: high
- Drought resistance: very good
- Productivity: exceptional
- Use: grazing and hay

Agronomic procedure

- Seeding period: September – October
- Sowing quantity: 35-45 kg/ha
- Sowing depth: 1 – 2 cm
- Fertilisation: N 50 kg/ha, P2O5 100 kg/ha, K2O 80 kg/ha
- Harvesting: the ideal period is at the height of the earing time

CINQUALE is a diploide variety of perennial ryegrass suitable for European areas and tempered climates. Its harvesting is rather versatile, with extremely good yield levels of high-quality good tasting forage. It ripens fairly late, showing high spring and summer persistence.

Due to its small size, the quick resprouting, good bouncing properties and good resistance to trampling, **CINQUALE** is also good for sport lawns and turf, both on its own, or mixed with other grasses.
