## **FORAGE GRASSES**

### ***Festuca arundinacea L.***

#### **TANGAROA**

#### **Morphological and physiological characteristics**

- Habitus : cespituous, high leaf – stem ratio
- Size: big
- Foliage : thin leaf
- Precocity : medium – early

#### **Agronomic characteristics**

- Heat resistance: high
- Drought resistance: very good
- Productivity: exceptional
- Use : grazing and hay

#### **Agronomic procedure**

- Seeding period: September – October
- Sowing quantity: 35-40 kg/ha
- Sowing depth: 1.5 – 2 cm
- Fertilisation: N 50 kg/ha, P2O5 100 kg/ha, K2O 80 kg/ha

---

**TANGAROA** is a variety of fescue with extremely good yield levels of high quality good tasting forage.

It has exceptional persistence, and great resistance to low winter temperatures. It has a high leaf to stem ratio, with leaves evenly distributed along the whole stem. The quick setting and re-sprouting properties – after harvesting – make it particularly aggressive towards weeds.
