LEGUMINOUS FORAGE CROPS

HAIRY VETCH.

SANTHAL

Morphological and physiological characteristics

- Shape : semi-prostrate
- Size: high
- Flower: purple flower head
- Re-sprouting speed: very fast

Agronomic features

- Cold resistance: good
- Diseases resistance: good
- Productivity: very high/excellent
- Use : pasture, hay

Technical advice

- Sowing time: ► autumn
- Sowing quantity: 100-150 seeds/m²
- Fertilization: 50 phosphor units, 30 nitrogen units.

The variety of Hairy Vetch **Santhal** has good resistance to low temperatures, and is cultivated even in the cooler areas.

With minimal requirements for cultivation practice, it produces an abundant amount of high quality fodder.

High in size (110-120 cm), with a very thin stem, is well suited for affiliated cultivation with cereals (triticale, celery, oats, wheat for biomass) and with forage grasses.

Santhal has a remarkable retreat speed, is very resistant to calving by cattle. It is suitable for grazing, for the production of green fodder and for hay.
